Project 01

AI-powered Project Management Platform

An intelligent workflow system for improving project visibility and execution efficiency

Tags

AI Agent Product Design PMO Workflow Automation

Overview

Designed a lightweight AI-powered project management platform to address challenges in project scheduling visibility, workflow complexity, and inefficient collaboration across PM, development, testing, and UI teams.

My Role

Product Manager / AI Solution Designer

Highlights

- Conducted research with **17 R&D members** and translated workflow pain points into product requirements and MVP roadmap.
- Designed core data models connecting **requirements, tasks, and Bugs**, with a three-level permission system.
- Proposed intelligent workflow mechanisms including:
 - Project health indicators
 - Drag-and-drop task boards with blocker alerts
 - Automated escalation reminders for overdue tasks
- Designed AI Agent scenarios for:
 - Risk prediction and schedule assistance
 - Delay detection and notifications
 - Automated project reports and retrospectives

Status

MVP development and testing phase

Project 02

MetaFit — AI-powered Fashion Recommendation & Virtual Try-on System

Combining LLM recommendation and AIGC virtual try-on for personalized shopping experiences

Tags

LLM RAG AIGC Computer Vision

Overview

Developed an end-to-end intelligent fashion system integrating LLM-based recommendation and AIGC virtual try-on to improve online shopping personalization and user experience.

My Role

Project Lead / AI Product Designer

Highlights

- Participated in system architecture design, building a complete workflow from: **User Intent → RAG Recommendation → AIGC Virtual Try-on**
- Defined MVP features and coordinated development progress across frontend and backend modules.
- Designed and optimized structured prompts covering:
 - Product category
 - Material
 - Style
 - Fit preferences
- Analyzed recommendation deviations and generation failures through **Bad Case analysis**, improving prompt robustness.
- Coordinated integration testing and collected user feedback to guide iterative improvements.
